CLAIMS

Hay

- 1. A computer-implemented method for modelling loans, the method comprising:
- (a) enabling a user to enter parameters relevant to a loan, the parameters including loan amount and loan term;
- (b) enabling the user to specify a number of options relevant to the loan, the options including at least one of the following:
 - low-start or fast-start loans,
 - regularly increasing repayments,
 - ullet reduced repayments for a specified period, and
 - variable repayments over different months of the year;
- (c) computing repayments due over the term of the loan, based on the parameters and options entered by the user; and
- (d) visually displaying information indicating the repayments due over the term of the loan
- 2. A method according to Claim 1 wherein the options also include lump sum repayments at specified dates.
- 3. A method according to Claim 1 wherein the step of enabling the user to specify a number of options comprises presenting the user with a sequence of screens, each of which explains a particular option and allows the user to accept or reject that option.
- 4. A method according to Claim 1 including the step of enabling the user to select one of a number of interest rate options.
- 5. A method according to Claim 1 wherein the information indicating the repayments due over the term of the loan is displayed in a visual representation including at least one of the following: a graph, a bar chart, a table.

- 6. A method according to Claim 1 including the step of enabling the user to select one of the following options for display in respect of each month over the term of the loan: monthly repayment; loan balance, interest charge, cumulative interest, and cumulative repayments.
- 7. A method according to Claim 1 wherein the step of computing repayments due over the term of the loan comprises:
- (a) allocating a monthly index for each month of the term, set initially to a constant value for each month;
- (b) implementing any fast-start or low-start option by modifying the index by a required percentage for a specified period;
- (c) implementing any regular increasing option by increasing the index over the period of the yoan;
- (d) implementing any reduced payments option, by decreasing the index for a specified period;
- (e) implementing any variable repayments option, by multiplying the index for each month by a monthly profile value; and
- (f) calculating the level of repayments required, using a goalseeking function which alters the repayment level until the closing balance is zero.
- 8. A computer system for modelling loans, comprising:
- (a) means for enabling a user to enter parameters relevant to a loan, the parameters including loan amount and loan term;
- (b) means for enabling the user to specify a number of options relevant to the loan, the options including at least one of the following:
 - low-start or fast-start loans,
 - regularly increasing repayments,
 - reduced repayments for a specified period, and
 - variable repayments over different months of the year;
- (c) means for computing repayments due over the term of the loan, based on the parameters and options entered by the user; and

- (d) means for visually displaying information indicating the repayments due over the term of the loan.
- 9. A computer system according to Claim 8, comprising a server computer running a server application, the server application being accessible by a number of client applications over a network.
- 10. An information carrier, holding a program for performing a computer-implemented method for modelling loans, the method comprising:
- (a) enabling a user to enter parameters relevant to a loan, the parameters including loan amount and loan term;
- (b) enabling the user to specify a number of options relevant to the loan, the options including at least one of the following:
 - low-start or fast-start loans,
 - regularly incréasing repayments,
 - reduced repayments for a specified period, and
 - variable repayments over different months of the year;
- (c) computing repayments due over the term of the loan, based on the parameters and options entered by the user; and
- (d) visually displaying information indicating the repayments due over the term of the loan.
